

ABSORBENT PRODUCT WITH REDUCED REWET PROPERTIES UNDER LOAD

ABSTRACT

An absorbent article having a substantially liquid impervious outer layer, a substantially liquid pervious inner layer overlaying and associated with the outer layer, an absorbent core disposed between the outer layer and inner layer, and an apertured film disposed between the inner layer and the absorbent core. The apertured film has a liquid impervious film surface with a plurality of protrusions extending therefrom towards the absorbent core. Each protrusion terminates at an aperture in the apertured film. The absorbent article has a 200 milliliter rewet under load of less than about 1.25 grams and a 300 milliliter rewet under load of less than about 4 grams
